APPENDIX	15

INTRODUCTION

Purpose

This report provides an overview and highlights the accomplishments of the Underground Storage Tank and Remediation Division (USTRD) for FY 2011-12. It also provides a comprehensive annual update regarding cleanup activities and lists the state's inactive and abandoned sites as required by La. R.S. 30:2226.H.

Division Overview

Protection of environmental resources and of the public health and safety of Louisiana's citizens are among the goals of the Office of Environmental Compliance. Within this office the USTRD serves to protect the soil and groundwater resources of the state from unauthorized and historical releases to the environment from leaking underground storage tanks and other sources. Restoration and preservation of these resources is provided by the USTRD through cleanup incentives, consistent application of risk-based cleanup standards, partnerships with government and other organizations at all levels, cooperation with innovative cleanup technology markets, and public outreach through workshops and conferences.

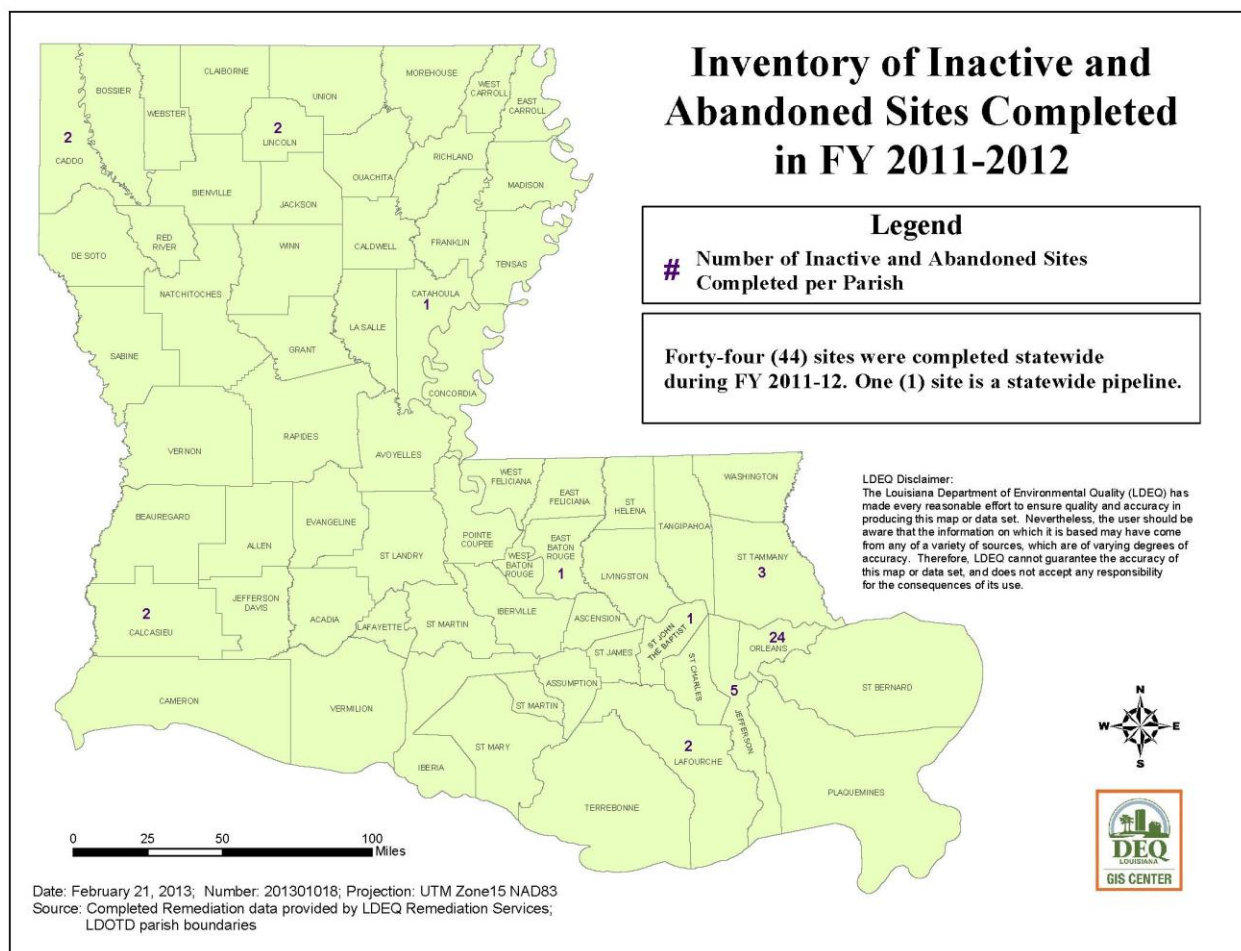

The USTRD has well-established partnerships with the U.S. Environmental Protection Agency (EPA) and the U.S. Department of Defense, and it collaborates with state and local agencies for specific programs and projects. These strategies continue to provide the basis for promotion and enhancement of property restoration for reuse and redevelopment, and for assistance in improving the state's economic climate.

Within the USTRD, the UST staff oversees underground storage tank removals, closures and cleanups, and ensures state compliance with the federal Energy Policy Act of 2005. The remediation staff of the USTRD investigates, evaluates, monitors, and oversees clean ups at both active facilities and abandoned properties. The remediation universe includes hazardous waste sites, solid waste sites, groundwater sites, Superfund sites, and Brownfields sites, as well as large chemical plants, refineries and other active facilities.

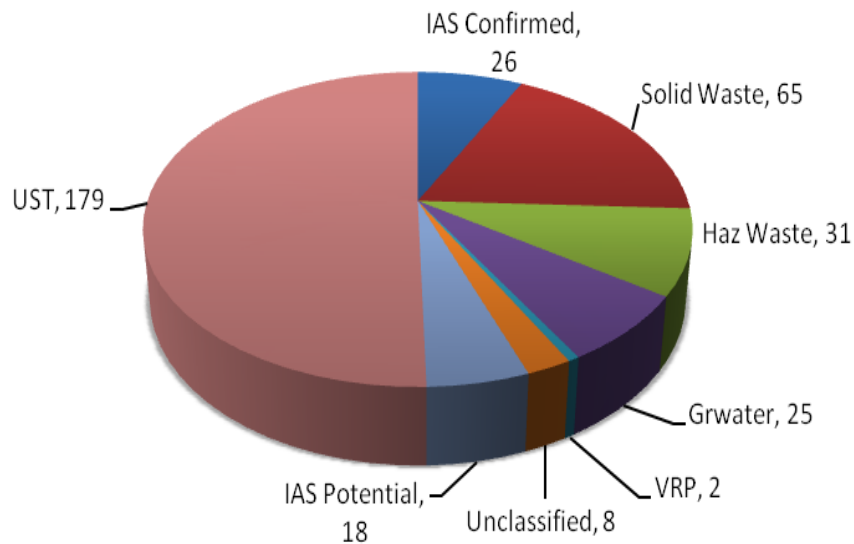

FY 2011-12 HIGHLIGHTS AND ACCOMPLISHMENTS

Inactive and Abandoned Sites Completed

The primary purpose of this report is to provide a comprehensive annual update regarding cleanup activities and to list the state's inactive and abandoned sites as required by La. R.S. 30:2226.H. The 44 inactive and abandoned sites completed by the USTRD during FY 2011-12 are mapped below and listed on pages 16-18.

In addition to the 44 inactive and abandoned sites, the USTRD completed 310 more sites, providing a total of 354 completed sites in FY 2011-12. The additional 310 sites included underground storage tank sites, solid waste sites, hazardous waste sites, groundwater sites, and Voluntary Remediation Program (VRP) sites, or portions thereof.

Number of sites completed by media FY 2011-12

Federally Funded Programs

Government Performance Results Act (GPRA)

Other USTRD accomplishments included one Ready for Reuse facility determination made jointly with EPA Region 6, with three planned for FY 2012-13. Additionally, USTRD met its revised goals for EPA Government Performance Results Act (GPRA) environmental indicators for federal FY 2011-12 at Resource Conservation and Recovery Act (RCRA) facilities with seven determinations of human exposures controlled, seven determinations of groundwater releases controlled, three facility-wide remedy selections, and two facility-wide remedy construction completions. This work is funded by the EPA Performance Partnership Grant.

Brownfields

There are an estimated 450,000 brownfields sites in the United States. Investment in these properties protects the environment by providing an alternative to developing open land and by utilizing existing infrastructure. Cleanup and redevelopment of brownfields properties also helps create jobs and enhance local economies. Through the Voluntary Cleanup Program (VRP) administered by the LDEQ Brownfields staff, a total of nearly 1600 acres of property in Louisiana has been addressed.

The LDEQ Brownfields team has also conducted several successful projects by utilizing EPA grant funding for purposes such as targeted brownfields assessments (TBAs), direct cleanups, technical assistance and outreach. During the past fiscal year, the Brownfields staff continued providing technical assistance to promote brownfields redevelopment throughout the state. Nearly all of the LDEQ TBA projects and all ten of the LDEQ completed and pending direct

cleanups have been or will be conducted in direct partnership with local Brownfields programs. For both TBAs and direct cleanups, local partners participate directly in site selection and LDEQ provides regulatory and technical assistance to these partners from concept to completion. Direct cleanups often involve nonprofit entities within the local program's jurisdiction, so both LDEQ and the local government partner are able to provide experienced assistance to the nonprofit organization.

The local programs are often in need of assessment funding, so the LDEQ TBA program provides them with a means to assess properties, thereby positioning them for cleanup funding. LDEQ has expended nearly \$1.4 million for TBAs at Louisiana brownfields properties.

Direct cleanup funds then help move local properties to redevelopment. Ten direct cleanups, completed and pending statewide, have been funded by the LDEQ Brownfields program. Direct cleanups completed include three properties in Shreveport, two in Baton Rouge, and one each in Westwego and Lake Charles. There are two more direct cleanups pending or underway in New Orleans and one more pending in Baton Rouge. These projects have provided over \$1.5 million in cleanup funds to local governments and nonprofits for cleanup of brownfields properties in Louisiana. Based on responses provided for seven of the ten cleanup projects, these cleanups have already facilitated or will facilitate in the creation or preservation of over 1400 jobs, and have leveraged nearly \$121 million in construction, redevelopment, and increased revenues / tax receipts.

Underground Storage Tanks

Energy Policy Act

The UST provisions of the federal Energy Policy Act of 2005 focus on preventing releases by requiring delivery prohibition for noncompliance, secondary containment, specific public records and reporting, inspections, and operator training. The LDEQ UST staff has worked closely with UST industry representatives including UST owners, operators, contractors and other stakeholders in order to successfully implement the requirements of each section of the Energy Act. For 2012, LDEQ met all the requirements of the UST provisions of the Energy Policy Act of 2005 with the exception of the 3 year inspection cycle requirement.

The UST Delivery Prohibition regulations allow LDEQ to immediately prohibit delivery into, or "red tag", underground storage tanks that do not meet upgrade requirements or are otherwise noncompliant. In order to provide adequate notification to product deliverers, LDEQ publishes a list of "red tagged" facilities on the LDEQ website (www.deq.louisiana.gov). This list is updated whenever facilities are added and removed from the list. LDEQ also provides emails and faxes to all identified active bulk fuel distributors every time a red tag is applied or removed from a UST. From the period of July 1, 2011 to June 30, 2012, LDEQ UST staff has red tagged 28 tanks at 9 facilities.

States are required by the federal Energy Policy Act to maintain, update at least annually, and make available to the public a record of: the number of underground storage tanks regulated; the number, sources, and causes of underground storage tank releases if known; the record of underground storage tank compliance; and data on equipment failures. Since December 2008,

LDEQ has annually published a Public Record report on the LDEQ website (www.deq.louisiana.gov).

Initial compliance inspections were required to be conducted for every UST facility by August 8, 2007 to meet federal Energy Policy Act requirements. LDEQ met this requirement by utilizing LDEQ staff, LDEQ contractors and EPA contractors. Following the initial inspections, each UST facility is required to be re-inspected for compliance at least once every three years. From the period July 1, 2011 to June 30, 2012, LDEQ UST staff completed 650 UST compliance evaluation inspections and LDEQ contractors completed 888 UST compliance evaluation inspections.

On August 8, 2010, LDEQ complied with the federal three year inspection cycle by inspecting all UST facilities at least once since August 8, 2007. LDEQ UST staff and LDEQ contractors are currently conducting UST compliance evaluation inspections in order to meet the next three year inspection cycle. In 2012, EPA re-defined the 3-year cycle to ensure that every facility is inspected within 3 years of their last inspection. This new interpretation caused LDEQ to list the inspection requirement as under development instead of as being met. LDEQ is in the process of ensuring that the new 3 year requirement interpretation is being met.

In addition to the compliance evaluation inspections required by the federal Energy Policy Act, LDEQ UST staff conducted 133 UST closure inspections, 59 UST installation and repair inspections, 53 follow-ups or re-visits, and 32 general or incident-related inspections between July 1, 2011 and June 30, 2012.

In February 2010, LDEQ promulgated regulations requiring training for all UST operators by August 8, 2012, in accordance with the federal Energy Policy Act. LDEQ has been sponsoring UST Operator Training seminars and the program is being administered by Louisiana Compliance Services, LLC (LCS), a subsidiary of the Louisiana Oil Marketers and Convenience Store Association (LOMCSA), through a cooperative agreement with LDEQ. Funding is provided through the Louisiana Motor Fuels Underground Storage Tank Trust Fund. The first training seminar was held on March 10, 2010. Between July 1, 2011 and June 30, 2012, 24 UST operator training seminars were conducted which resulted in a total of 1091 certified UST operators representing 764 UST facilities.

The LDEQ UST staff is also responsible for responding to UST-related complaints and UST-related incidents (confirmed or suspected releases) that are reported. Each of these incidents requires an investigation (one or multiple site inspections, review of data or paperwork, or oversight of an assessment or remediation activities), a database entry, a report, and a review of all information by a supervisor and/or senior scientist. LDEQ UST staff responded to 493 incidents from July 1, 2011 to June 30, 2012.

Leaking Underground Storage Tanks American Recovery and Reinvestment Act

LDEQ was awarded \$2,680,000 in Leaking Underground Storage Tank (LUST) Trust Fund American Recovery and Reinvestment Act (ARRA) funding, and began work in FY 10 with site investigation and risk evaluation on ten priority sites. The purpose of the LUST Trust Fund

ARRA Cooperative Agreement is to provide assistance to states to increase the pace of cleaning up petroleum releases from USTs where owners and operators are unknown, unwilling, or unable to take corrective actions themselves. All sites funded by LUST ARRA are those that scored highest in the LDEQ Abandoned UST Priority Ranking System - combining factors of threat to human health and the environment, explosive and vapor hazard, ground water contamination, measurable free product, estimated volume released, off-site impact, and surface water impact. Seven of the nine sites requiring corrective action have ground water contamination indicating the need for multi-year remediation. The sites with more extensive contamination have impacted surrounding properties including residences, a community center, a day care center, restaurants and other commercial properties. As of June 30, 2012, seven corrective action contracts were underway with two additional corrective action contracts tentatively awarded. All ten site investigation contracts were completed under budget prior to commencement of the corrective actions.

Leaking Underground Storage Tanks Gulf of Mexico Hurricane Supplemental Funding

During FY 2011-12 LDEQ also continued projects funded by EPA awards appropriated specifically for assessment and corrective action at UST sites affected by Hurricanes Katrina and Rita. LDEQ originally documented a total of 152 confirmed hurricane related releases after conducting 114 comprehensive site assessments. Following completion of site specific risk evaluations, 38 sites remained with contaminant concentrations exceeding risk based corrective action standards. Additional investigations were conducted at 23 sites to determine the full extent of contamination. As a result, LDEQ determined that a total of 22 sites required corrective action. As of June 30, 2012, corrective actions had been completed at 14 of the 22 sites. LDEQ has closed out 136 releases and 93 sites. Groundwater corrective actions at approximately seven sites in Jefferson, Cameron, and Calcasieu parishes are expected to continue into subsequent fiscal years.

BP Oil Spill

Staff members of the LDEQ USTRD continued their roles in the joint response effort during FY 2011-12 serving as Louisiana On-Scene Coordinator, Environmental Unit Liaison, Shoreline Coastal Assessment Team (SCAT) Coordinator, and SCAT field team members of the Unified Command at the Gulf Coast Incident Management Team. The USTRD maintained coordination with the Louisiana Departments of Wildlife and Fisheries, Health and Hospitals, and Agriculture and Forestry, as well as the U.S. EPA and other federal agencies again this past year.

The remediation staff continued conducting shoreline monitoring, studying numerous toxicological issues, and performing its key role in data management. Data collected from all agencies for seafood, water and sediment testing were reviewed and imported into the Louisiana Environmental Analytical Data Management System (LEADMS). Public accessibility to the data was maintained through a web-based, interactive database. This allowed consumers the ability to continue viewing individual and total test results for Louisiana seafood for assurance in the safety of Louisiana seafood. The LDEQ USTRD staff spent over 8,000 hours performing all of these tasks during last fiscal year.

FY 2011-12 HAZARDOUS WASTE SITE CLEANUP FUND

Purpose

The Hazardous Waste Site Cleanup Fund (HWSCF) provides for statewide identification, investigation, containment, control and cleanup of both hazardous and non-hazardous waste sites that have been determined priority sites by LDEQ. In addition to providing for state-funded work at these waste sites, the HWSCF is also used to match EPA-funded cleanup work at Superfund sites, to match EPA-funded priority removal work at other sites, to fund long-term operation and maintenance contracts at Superfund sites where remedy construction has been completed, and to provide supplemental funding for abandoned UST sites.

At the end of FY 2011-12, there were 194 confirmed inactive and abandoned waste sites in the remediation site universe. Confirmed sites with no financially solvent responsible parties may be eligible for remediation with government funding from EPA Superfund (if they qualify) or the HWSCF. In addition to the 194 confirmed sites, there were 328 sites possibly needing evaluation as of the end of FY 2011-12. These are termed potential sites by the Remediation staff. Comprehensive lists of all of the inactive and abandoned confirmed and potential sites known as of June 30, 2012 are also provided in this report on pages 19-30, and they are mapped on page 33.

Site Prioritization System

The Remediation staff applies the HWSCF Site Prioritization System to confirmed hazardous and non-hazardous waste sites which may be funded by the HWSCF. Each site is prioritized by a numerical ranking system based on: health risks, groundwater and surface water contamination, owner/operator recalcitrance or refusal to comply with department required actions, site owner/operator financial capabilities, eligibility for any other viable funding mechanisms, availability of money within the fund, and determination by the Secretary that the fund should be used to facilitate actions in a timely manner to abate emergencies. The goal of the prioritization scheme is to allow the Remediation staff to maximize risk reduction in proportion to the fund dollars spent. The Remediation staff uses the prioritization numerical ranking system as a tool to achieve this goal. There were 43 eligible inactive and abandoned waste sites on the HWSCF Prioritization List as of the end of FY 2011-12.

During FY 2011-12, the Remediation staff continued utilizing the HWSCF for contracts to conduct coring services, monitoring well installation and sampling, analytical services, remediation services, and operation and maintenance, as needed for investigation and cleanup at high priority confirmed sites. An Interim Corrective Action Surface Removal at the “Stevens site, Tract 15”, Plugging and Abandonment of wells at the “US Rig” site, a Preliminary Evaluation Assessment Phase II at the “Jefferson City Gas and Light” and “Stoner Street” sites, and coring services at the “Marine Shale” and “Rogers Enterprises” sites were all conducted in FY 2011-12.

Use for Superfund Sites

LDEQ paid \$103,026 in FY 2011-12 for 10% state match for EPA-funded remediation at the American Creosote Works Superfund site. State match is invoiced and paid in accordance with Superfund State Contracts. Payments are due in October each year.

LDEQ continued its operation and maintenance contracts during FY 2011-12, and continued additional clearing, grubbing and tree removal at the Delatte Metals site. A total of \$738,942 was paid from the HWSCF to LDEQ contractors for continuing long-term maintenance work at three Superfund sites: Bayou Bonfouca, Delatte Metals, and Madisonville Wood Preserving. The state is responsible for funding and implementing long-term operation and maintenance at these sites until determined to be no longer necessary through five-year reviews. In future years, the state will be responsible for maintenance at additional Superfund sites, as remedial work is completed.

Future Plans

Thirty-five sites have been identified as highest priority. In FY 2012-13, the Remediation staff anticipates initiating interim corrective action, investigation, and priority based corrective action on confirmed sites, Preliminary Evaluation Assessment Phase II on potential sites, and coring services as needed for investigation. Additionally, the HWSCF will be used to fund abstract services and costs to file liens for sites where the owners/operators have provided sufficient evidence that they do not have the financial capability to undertake remediation work. The USTRD will also continue using the HSWCF to match EPA cleanup work at Superfund sites, to continue long-term operation and maintenance contracts at Superfund sites, and to provide supplemental funding for abandoned UST sites if needed.

FY 2011-12 SITE SUMMARIES

Bayou Bonfouca Superfund Site Operation and Maintenance

The Bayou Bonfouca Superfund site in Slidell, St. Tammany Parish, is a former wood preserving facility that was remediated in the 1980s and 1990s using federal authority under the EPA Superfund Program. The remedy included dredging of contaminated sediments, onsite incineration of contaminated soils and sediments, and extraction and treatment of contaminated ground water. Incineration of contaminated soils and sediments was completed in July 1995. Ground water treatment began in June 1991 and it continues to reduce the volume of contaminated ground water and prevent its migration. Additional ground water recovery wells were installed and began pumping along Bayou Bonfouca in May 2000. Cleanup costs totaled nearly \$140 million dollars.

Original 60 Horsepower Gardner Denver Compressors

Following remedy completion, the state becomes responsible for long-term site operation and maintenance (O & M) and must provide 100% of the funding for this, as required by federal Superfund regulations. The Bayou Bonfouca site O & M became the responsibility of LDEQ in July 2001 for ongoing treatment of contaminated ground water and dense non-aqueous phase liquids (DNAPL) recovery. The treatment system recovers DNAPL for storage and disposal offsite and residual ground water is processed via the on-site waste water treatment system.

Air Dryer/Accumulator/Piping for Water

Air compressors are used to generate pressurized air for operation of the ground water down-hole stainless steel pumps. The pumps are designed to operate in the extremely demanding DNAPL environment at the site to minimize periodic maintenance/repair downtimes. The two air compressors at Bayou Bonfouca, original to the ground water treatment system installed in 1985, had been operating for over 25 years. As one of the compressors started to exhibit overheating problems, it

was anticipated that major repairs and/or maintenance costs would occur if replacement was not feasible.

The compressors operated continuously in lead / lag mode (one for a period of time and then the other) according to operator-directed run times and periodic maintenance periods. Typical energy use was approximately 34 kW at about 50% capacity in routine operational mode. This generated 80-100 psi residual air pressure to run the pumps. There are 44 well pumps utilizing compressed air. Electricity and water costs to operate this system averaged from \$41,300 to \$44,600 per year.

LDEQ remediation staff proposed replacement and upgrade of the aging compressors and related equipment during FY 2011-12. The replacements proposed are 50 horsepower direct drive variable speed rotary screw type compressors. They are air-cooled; no water is needed to cool the lubrication oil, and there are no belts or gears. Due to their higher efficiency motors and variable speed, a significant reduction in kW is realized (16 kW versus 34 kW).

Quincy Compressor #2

An estimate of capital outlay costs (compressors, associated equipment, installation, and shake-down) and a cost benefit analysis were prepared. Total costs for the two compressors were estimated at \$68,576 (for two new units) and annual savings in electricity and water costs were estimated at \$15,300 and \$8,600, respectively (\$23,900 total). The simple payback on capital costs was estimated to occur in approximately 35 months.

Actual cost of the two new compressor units, associated equipment and installation was \$66,339. The two original compressors and air dryer were sold at auction for \$2,350. Average savings for electricity and water costs per month since installation in September 2011 have been approximately \$1,778 per month or \$21,336 per year. Payback will be achieved after approximately 37 months.

A significant cost savings is being realized by replacing and upgrading the compressor system at Bayou Bonfouca. Due to the age of the original compressors, with each unit at or approaching 100,000 hours run time, significant repair and maintenance costs would have occurred in the near future. Upgrading the compressors also satisfies EPA green remediation goals by reducing electrical power demand by approximately 44% and water usage by approximately 87%. After approximately 37 months, the cost savings to the state for site operation will be over \$20,000 per year.

Lake Charles 409 Enterprise Boulevard Property

In 2010, LDEQ awarded a cooperative agreement to the City of Lake Charles for cleanup of the 409 Enterprise Boulevard property. This agreement, in the amount of \$200,000, was funded by the LDEQ Brownfields Revolving Loan Fund grant.

The Lake Charles property was formerly a gas station which had both soil contamination and underground fuel storage tanks remaining at the site. This property sits along a major street improvement and economic development project corridor in Lake Charles. This new corridor, as well as the prime corner location of the property, makes it an ideal candidate for future redevelopment. The City of Lake Charles expects a private, commercial use for the property.

Cleanup of this property presented the challenges of both the timing of remediation with adjacent road construction, and of a necessary two-part remedy. The remedy consisted first of removal of petroleum underground storage tanks associated with the former gasoline station under the LDEQ Underground Storage Tank regulations. The second part of the remedy involved removal of petroleum-contaminated soils and installation of a permanent barrier that was to be formed by the concrete road - hence the timing with the boulevard construction. The second remedy was performed under the guidelines of the LDEQ Voluntary Remediation Program. The entire remediation, completed in the summer of 2012, was performed under budget at \$191,611.

This project is the culmination of a long partnership with the City of Lake Charles, with the LDEQ Brownfields staff having provided technical assistance on a number of city brownfield projects and in return, learning much from its participation. The LDEQ Brownfields staff looks forward to many more years working with the City of Lake Charles to locate, clean up, and recycle brownfield properties.

Road construction prior to concrete surfacing

Contaminated soil excavation and view of new road surface

Soil stockpiling and concrete road serving as barrier

Westwego Former Clem's Station / Future City Hall Property

LDEQ awarded to the City of Westwego a Brownfields Revolving Loan Fund cooperative agreement in 2010 to clean up the former Clem's property. This site was formerly used as a gasoline station and mechanic shop, followed by other retail related uses. This ideal property occupies a large city block, and is planned as the site for the new Westwego City Hall and Police Headquarters.

The current city hall and police headquarters were damaged during Hurricane Katrina, and the City had already procured FEMA funding to construct a new facility. In anticipation of the cleanup and redevelopment, the LDEQ Brownfields program had performed environmental assessments at the site under its Targeted Brownfields Assessments contract in order to locate any petroleum underground storage tanks and to determine the full nature and extent of contamination at the site. Based on results of this evaluation, \$100,000 was budgeted for the cooperative agreement to remediate the site.

The Westwego project presented the LDEQ Brownfields program with a great opportunity to partner also with the New Orleans Regional Planning Commission (RPC). The RPC agreed to provide additional match funding for a cooperative agreement with Westwego to provide for a consultant to serve as the Qualified Environmental Professional (QEP) to oversee the cleanup process for the city. The QEP assisted the City in selecting a competitive cleanup contractor, overseeing the work, and preparing a final remediation report.

This project also provided a unique opportunity for the LDEQ Brownfields program to provide "start to finish" services for this site, in the form of Targeted Brownfields Assessment services to investigate and evaluate contamination, and then in the form of the cooperative agreement which funded the actual property cleanup using Brownfields Revolving Loan Funds under LDEQ's Voluntary Remediation Program.

Removal of the underground storage tanks, a hydraulic lift, and soil contaminants was completed in the summer of 2012. Cleanup activities came in under budget at \$83,324.

This project allowed LDEQ to partner with both a city and a state regional planning commission, using multiple sources of funding to facilitate the assessment, cleanup, and future redevelopment of a property that will benefit the City of Westwego for years to come.
